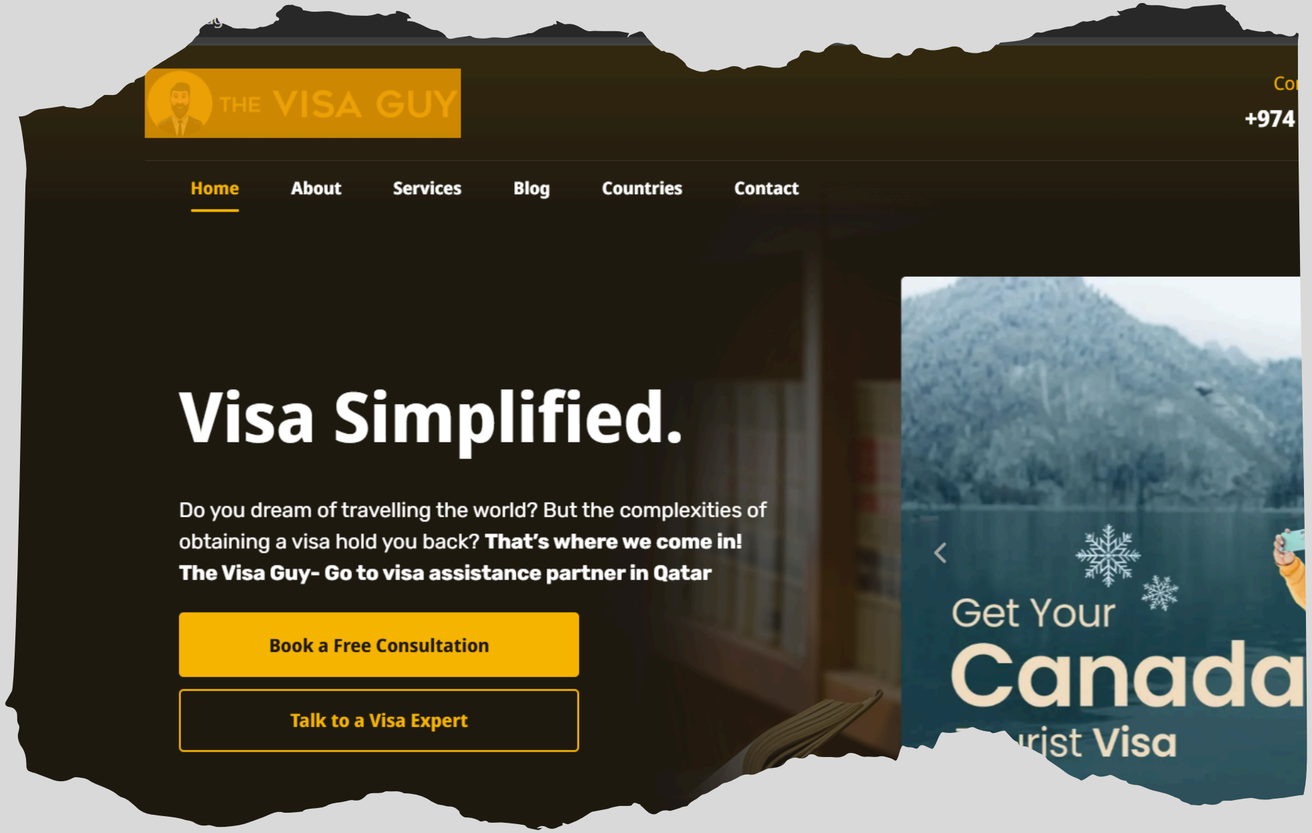
Website Overview

VisaGuy.qa is a service-focused visa consultancy website targeting residents in Qatar who require professional assistance with international visa applications. The website is designed to capture high-intent users looking for guidance on visa processes, documentation, and embassy appointments, particularly for commonly requested visas such as Schengen and tourist visas.

From what I understood, the site acts as a guide and support platform, offering information and professional help for popular visa categories like Schengen, UK, and visit visas. The goal is not just to provide information, but also to encourage users to contact the team for expert assistance.



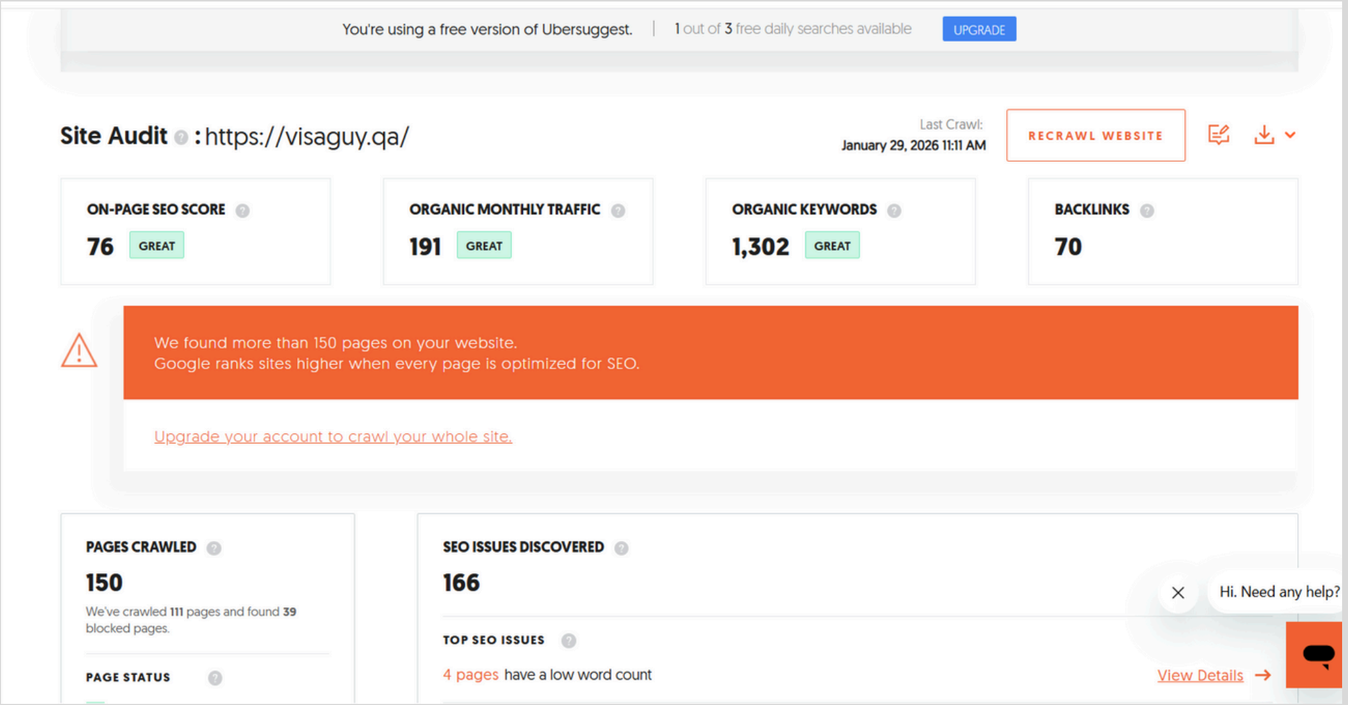
On-Page SEO Audit

ON-PAGE SEO SCORE - 76

ORGANIC MONTHLY TRAFFIC - 192

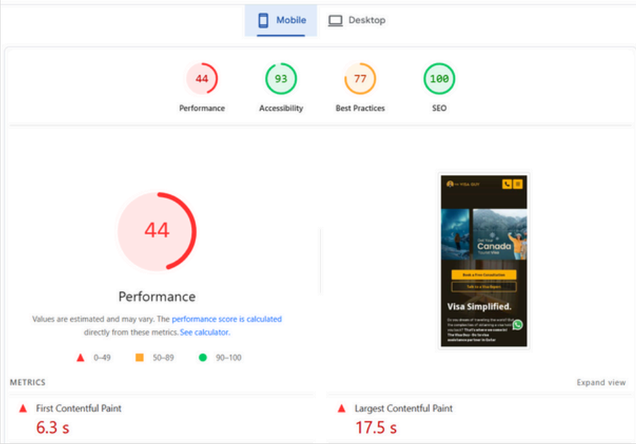
ORGANIC KEYWORD - 1,302

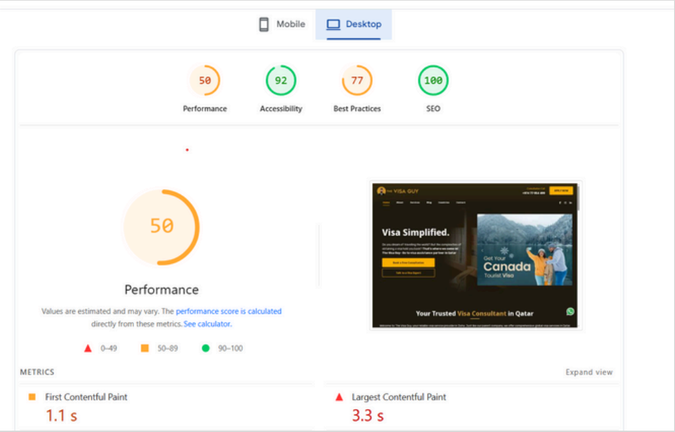
paid - 0



- **Page Speed Performance**

“Based on a PageSpeed analysis, the website currently scores 44 on mobile and 50 on desktop, which indicates performance optimization opportunities, especially for mobile users.”



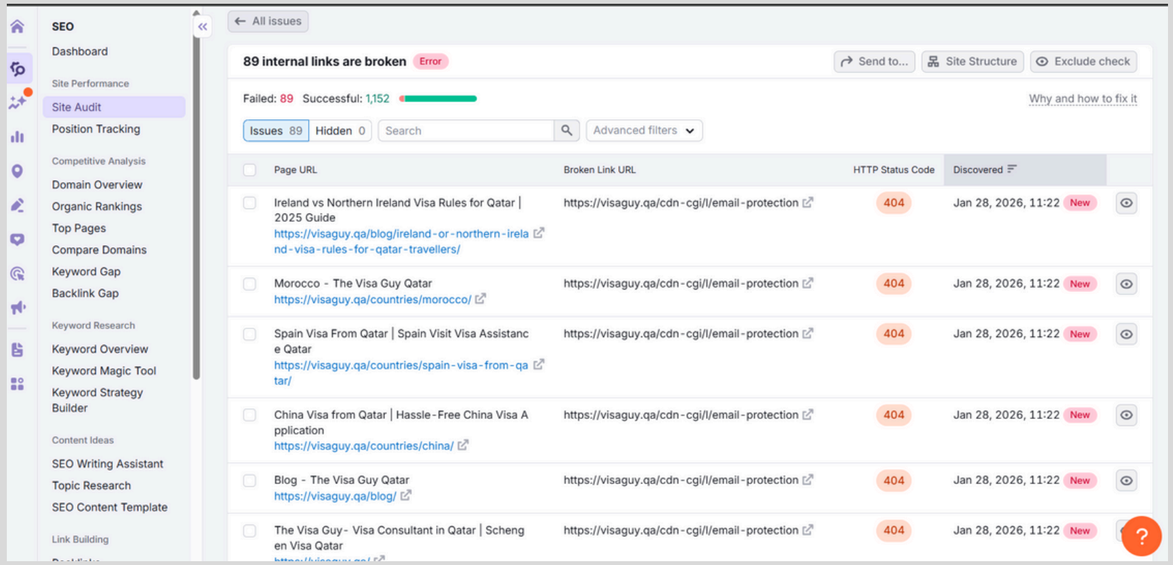


How I Improve Page Speed:

- Compress and serve images in WebP
- Minify and defer CSS and JavaScript
- Move inline CSS to external files
- Enable browser caching and GZIP compression
- Use a CDN for faster global delivery

- **Internal Linking Issues**

“There are currently 89 broken internal links, so fixing internal linking is a priority to improve crawl efficiency and user experience.”



How I Would Fix the Broken Internal Links

- First, I’d run a full site crawl using a tool like semerush to clearly identify all broken internal URLs.
- Then, I’d review each broken link and either update it to the correct live page or replace it with the most relevant existing content.
- For pages that no longer exist but still have value or backlinks, I’d implement proper 301 redirects to preserve SEO equity.
- Finally, I’d set up periodic link audits to make sure new broken links don’t appear over time.

- **81 pages have low text-HTML ratio**

  ”About 81 pages have a low text-to-HTML ratio, so improving content depth and reducing unnecessary markup would help search engines better understand those pages”.

- **Sitemap & Crawlability Issue**

  “The audit shows that the XML sitemap is not referenced in the robots.txt file, which means search engines are not being explicitly guided to the site’s important pages.”

  How I Would Fix It

  - Add the sitemap URL directly to the robots.txt file
  - Ensure the sitemap is clean, updated, and includes only indexable pages
  - Submit the sitemap in Google Search Console for better crawl control
  - Monitor crawl coverage to ensure pages are being indexed properly

- **2 pages require content optimization**

  “Two pages need content optimization to better match search intent and improve overall relevance.”

  How I Would Fix It

  - Expand the content with clearer explanations of services and processes
  - Align headings and body content with primary and secondary keywords
  - Add supporting sections such as FAQs, timelines, and document checklists
  - Improve internal linking from related pages

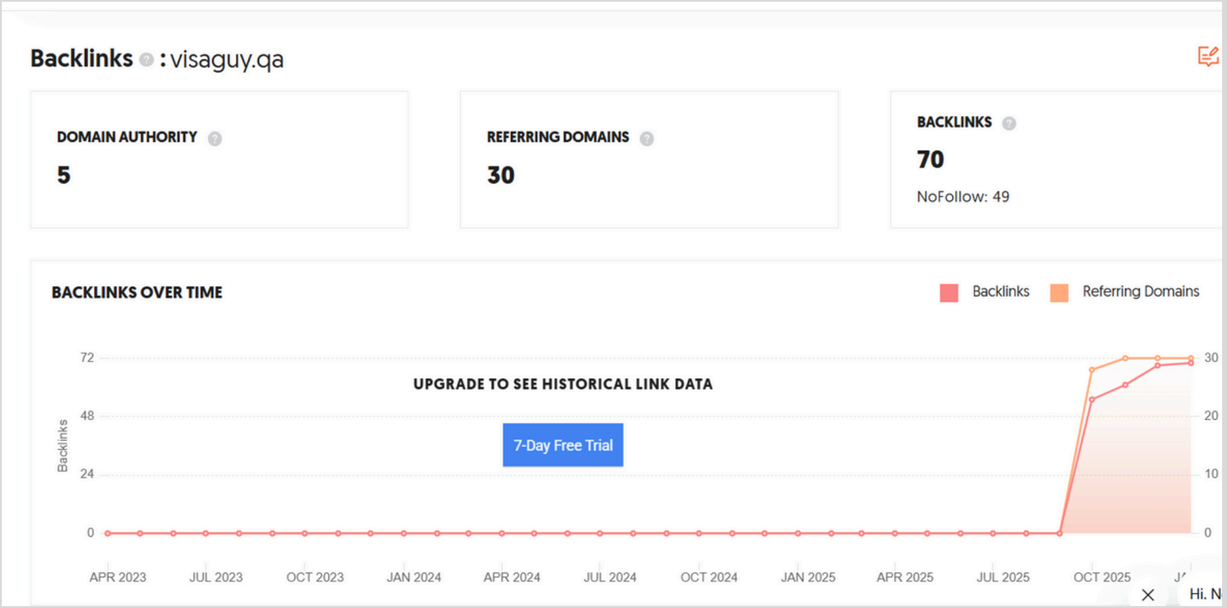
Off-Page SEO Audit & Recommendations

DOMAIN AUTHORITY - 5

REFERRING DOMAINS - 30

BACKLINKS - 70

NoFollow - 49



”The current off-page profile is weak in authority and relevance, so I’d build targeted links from Qatar-specific directories, travel/expat blogs, local media mentions, partner sites, and community forums to boost trust signals and organic visibility”.

Specific Actions to Improve Link Profile:

- Local Qatar Directories: Submit VisaGuy.qa to directories like Qatar Living, Doha Guide, and other trusted local business listings.
- Targeted Guest Posts: Write articles for blogs aimed at Qatar residents planning international travel, e.g., “Step-by-step Schengen visa guide from Qatar” or “Common visa mistakes to avoid when applying from Doha.”
- Expat & Travel Communities: Contribute answers on forums like Qatar Living, ExpatWoman, and Reddit’s Qatar threads, linking to relevant VisaGuy.qa pages.
- Media Mentions & Partnerships: Reach out to local news outlets, travel magazines, and partner agencies to feature VisaGuy.qa as a trusted visa consultancy.
- Resource Content Links: Create practical guides (e.g., “Complete list of documents for Schengen visa from Qatar”) that local blogs, schools, and travel sites naturally reference.

How to Track & Maintain Link Profile

- Use tools like Google Search Console to see referring domains
- Use Ahrefs / SEMrush to audit link quality
- Set up monthly monitoring for new backlinks
- Disavow toxic or spammy links if found (Google Disavow Tool)

Topic Cluster Strategy

When I planned the content strategy, I didn’t start with random blog ideas. I first tried to understand what people in Qatar actually struggle with when applying for a visa. Most users are confused about preparation, documents, timelines, rejection risks, and embassy appointments. So I built the content around those real concerns.

Pillar Topic

Visa Application Guide for Qatar Residents

This page acts as the central point of the website. It gives a clear overview of visa services and naturally connects to all related topics. I chose this because most users start their search with a general understanding before moving into specific visa types.

Primary keyword: visa services Qatar
Supporting keywords: visa consultant Qatar, apply visa from Qatar

Cluster Topics

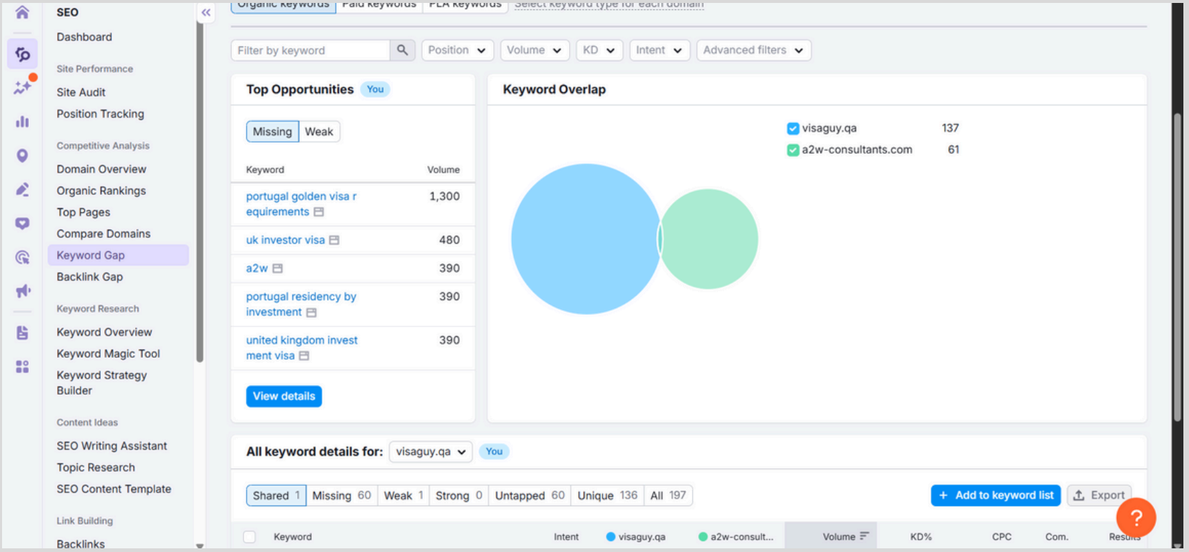
Instead of writing generic blogs, I focused on real questions people in Qatar have when applying for a visa:

Things to Prepare Before Applying for a Visa from Qatar
Helps users know if they're ready and builds early trust.
Schengen Visa vs UK Visa – Which Is Easier from Qatar?
Supports users who are comparing options before applying.
Visa Processing Time from Qatar – What Really Affects It
Why Visas Get Rejected from Qatar (And How to Avoid It)
Addresses common fears and attracts high-intent users.
Explains real reasons behind delays instead of generic timelines.
How Embassy Appointments Work in Qatar
Solves one of the most confusing steps in the visa process.

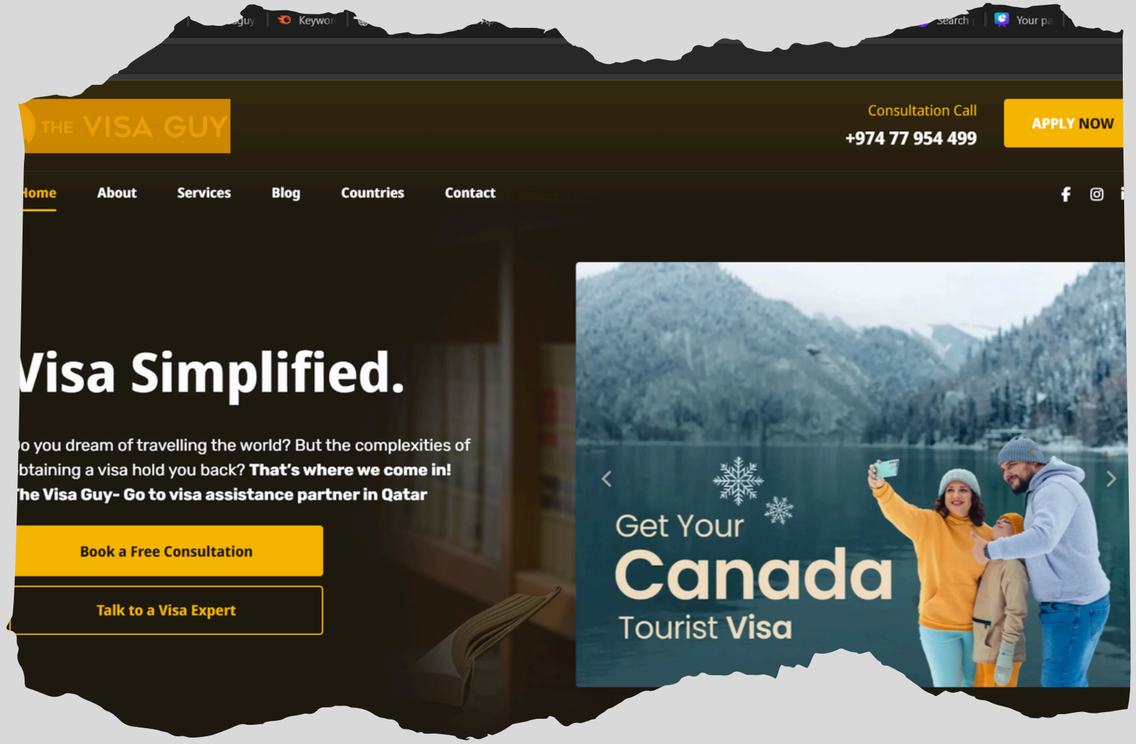
Each of these pages links back to the main guide, helping both users and search engines understand the site structure clearly.

Keyword Gap

“My strategy starts with identifying keyword gaps between our website and competitor sites. I noticed many relevant keywords we weren’t ranking for, so I created targeted and trending blog topics around those keywords. I then optimized the content properly for SEO, making sure the keywords were used naturally. This helped improve visibility and rankings for those missing keywords.”



Conlusion



In summary, this SEO strategy is built around real user intent and measurable opportunities. It starts by fixing key technical and on-page issues to create a strong foundation. Then, by identifying keyword gaps and creating relevant, search-driven content through a topic cluster approach, the website can capture missed traffic and improve visibility for high-intent visa searches.

Combined with focused optimization and structured internal linking, this approach helps VisaGuy.qa strengthen authority in the Qatar visa niche, attract qualified users, and support consistent, long-term organic growth

Thank You
